

# 10 Reasons to use SHE Software

## Why should I use SHE Software as my management system?

SHE is an affordable business solution that helps automate and streamline an organisation's work related Health & Safety strategy. It provides staff across the business with easily accessible up-to-date information including new ways to ensure and maintain compliance.

Here are the top ten reasons why your Safety Management solution should be SHE:

### 1. Manage safety data centrally to improve efficiency.

SHE provides each user with a **configurable dashboard** showing business information unique to them. With direct drill-down, you can move from summary information to **real-time detail for analysis** and quick decision making based on real time data.

### 2. Control the quality of information available to staff.

The SHE **workflow** ensures information given to staff is fit for purpose. Records are approved or rejected by a competent person; all interactions are tracked, providing a **comprehensive evidence** trail.

### 3. Be productive regardless of location.

SHE **mobile** allows staff to perform audits and assessments without paper. Employees can be productive both in the office and on site, even if not connected to a network. Assessments and Audits are synchronised with the main system, **reducing time** and paperwork.

### 4. Generate key business reports in seconds.

The SQL Server Reporting Services engine is a powerful analytical tool. SHE includes preconfigured **comprehensive management reports** showing standard health & safety KPI's and metrics. In conjunction with the Dashboard, management have a complete view, in real time, of business safety strategy.

### 5. Secure sensitive information.

SHE contains an extremely comprehensive and **simple user management** system allowing defined roles within the software. Protect important data and with the option of single sign on, you have the tools to make sure the **right information** is delivered to the right people.

### 6. Works with Microsoft Office™.

SHE reports can be exported to **MS Office** Excel, HTML or PDF. Quickly turn information into performance snapshots for meetings and reviews. Understand in seconds how safety projects are performing and make changes to **benefit the business**.

### 7. Works the way your business works with easy configuration.

SHE can be **configured** to work the way your business already works. You do not need to pay large costs for customisation. With a configurable risk matrix, templates and user defined pick list values, information can be designed and modified by you, **without paying** for changes to the software.

### 8. Integrate with elearning systems.

SHE harnesses the power of **web services** to allow you to manage all training information. Partnerships are already in place that allows **elearning suppliers** to send training information to the SHE training module.

### 9. Audit trail every event to guarantee compliance.

It is more important than ever to ensure proof of conformity is maintained. SHE offers a way of **recording every change** to safety related data, giving peace of mind and evidence of compliance in the event of an occurrence.

### 10. Provide guidance to all users maintaining data integrity.

One of the most challenging aspects of maintaining a safety management system is ensuring the data collected is correct and accurate. SHE provides **configurable guidance** beside every caption in the system. This allows management to provide a user with clear instructions on how to complete forms ensuring information entered is correct and **reducing training costs**.
